
This is the general UI design for the Login and Sign-up page.

Login menu includes:

1. Logo placeholder positioned at the top of the login box
2. Title as “Login” to identify function
3. Username Field- the box itself has curved edges for cleaner aesthetic; allows user to input their username
4. Password Field – curved edges to continue theme; at the very end of the box there is an eye which can be clicked and hides characters the user input for privacy
5. Remember me checkbox- improves user experience by reducing repetitive logins
6. Login button – completes the form sends account credentials to authenticator
7. Forgot password? – clickable link which sends user to account recovery page.
8. Or Sign-up- clickable triangle that navigates user to sign-up page to complete sign up form

Design Notes:

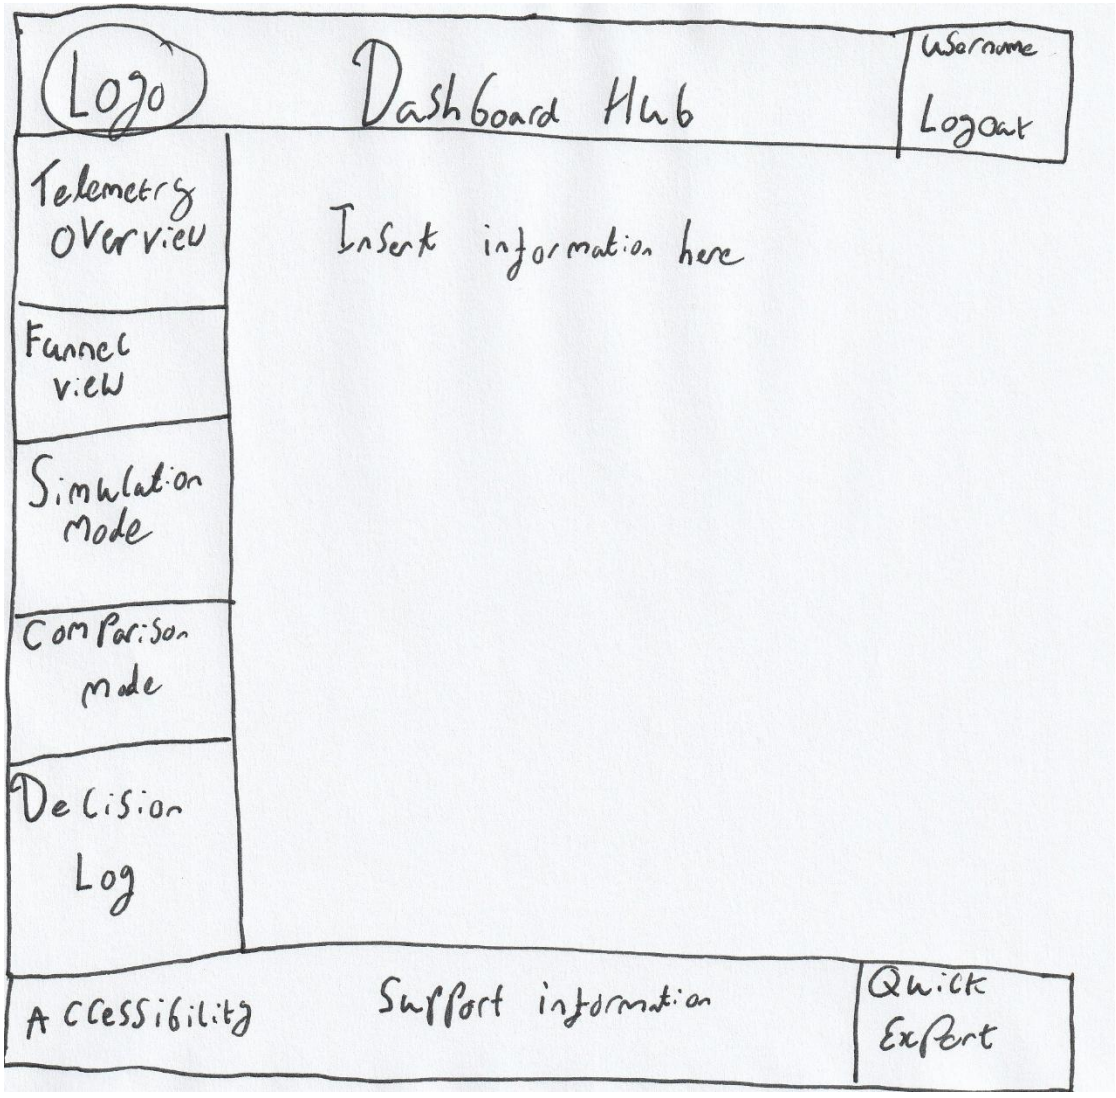
1. Login box is centred on the web page
2. Focuses minimalist layout to be user friendly

Sign-Up menu includes:

1. Logo placeholder positioned at the top of the login box
2. Title as “SignUp” to identify function
3. Username Field- the box itself has curved edges for cleaner aesthetic; allows user to input their desired username
4. Email Field- curved edges; allows user to input their email which is required for account creation and future potential recovery
5. Password Field – curved edges to continue theme; at the very end of the box there is an eye which can be clicked and hides characters the user input for privacy
6. Consent checkbox- Required check box to accept the terms and conditions
7. Terms and conditions- Link to terms and conditions information
8. SignUp button – completes the form sends account credentials to account creator tool
9. Back – clickable arrow to allow the user to return to the previous page

Design Notes:

1. SignUp box is centred on the web page
2. Focuses minimalist layout to be user friendly



This is the general UI design for the dashboard hub which can also act as the base page layout for the sub-pages

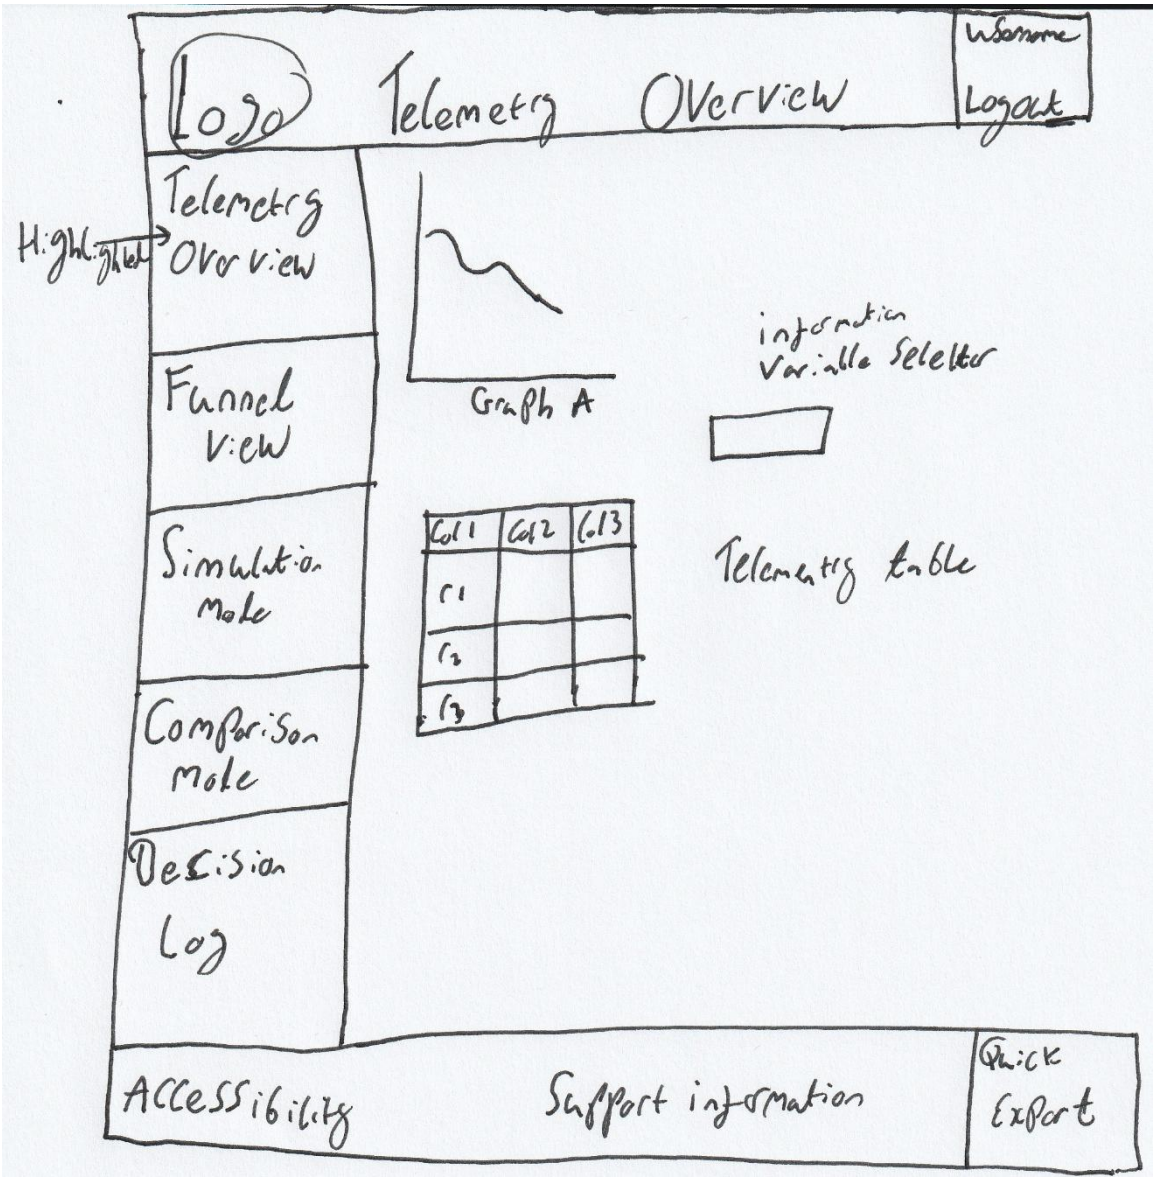
Dashboard Hub includes:

1. Header- outlined header which encompasses the: title, logo, and logout function; simplistic design for first sprint
2. Logo placeholder- this will be created after the main implementation is working
3. Title- as “Dashboard Hub” to identify the page function
4. Logout function- clickable logout tile which allows the user to securely exit the page
5. Navigation tiles- left hand side navigation is handled by tiles and not links which improves user experience and aesthetics
6. Telemetry overview tile- opens the telemetry overview page which encompasses the general telemetry information

7. Funnel view tile- opens the funnel view page which shows level by level player data, visualised drop off points and more
8. Simulation mode tile- opens the simulation mode page which has variable change functionality and outputs a visualised prediction
9. Comparison mode tile- tile isn't clickable just a placeholder for the second sprint
10. Decision log tile- opens the decision log page which logs specific variables like time, id, level, what the change was and the reason etc; keeps telemetry changes logged and accessible
11. The main section- this is where the information for what this dashboard is and how its used goes
12. Footer- holds accessibility which is clickable opening up accessibility options such as colour-blindness options; holds support information; holds the quick export tile function which exports telemetry data to a CSV file

Design Note:

1. In the main section the information will be centred and may include pictures or examples for understandability
2. The design is simplistic making it feasible for sprint 1 and user friendly



This is the general UI design for the telemetry overview which holds the most important game telemetry information and visualises it in a user focused structure

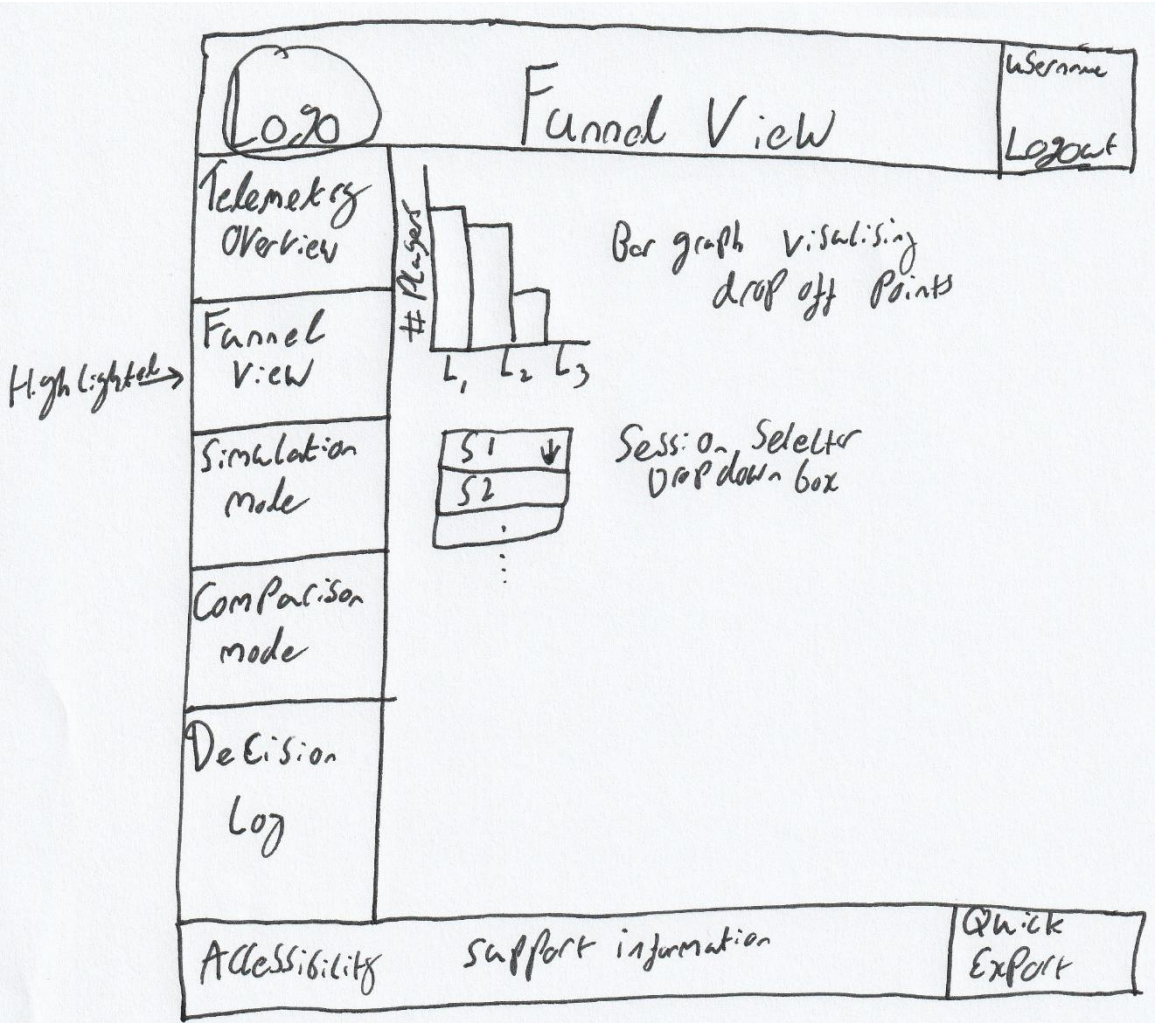
Telemetry overview includes:

1. Header- outlined header which encompasses the: title, logo, and logout function; simplistic design for first sprint
2. Logo placeholder- this will be created after the main implementation is working
3. Title- as “Telemetry Overview” to identify the page function
4. Logout function- clickable logout tile which allows the user to securely exit the page
5. Navigation tiles- left hand side navigation is handled by tiles and not plain links which improves user experience and aesthetics

6. Telemetry overview tile highlighted- the highlighted tile identifies the current page the user is on
7. Funnel view tile- opens the funnel view page which shows level by level player data, visualised drop off points and more
8. Simulation mode tile- opens the simulation mode page which has variable change functionality and outputs a visualised prediction
9. Comparison mode tile- tile isn't clickable just a placeholder for the second sprint
10. Decision log tile- opens the decision log page which logs specific variables like time, id, level, what the change was and the reason etc; keeps telemetry changes logged and accessible
11. The main section- this holds the bulk of the telemetry data in an easy to interpret way; does have access to the main telemetry database which will be used to create graphs and sub-tables for the specific telemetry data required
12. Footer- holds accessibility which is clickable opening up accessibility options such as colour-blindness options; holds support information; holds the quick export tile function which exports telemetry data to a CSV file

Design Note:

1. In the main section the information will be centred and will have graphs and tables to represent the data. Will have short explanations when you hover over each section to improve understandability and user experience
2. The design is simplistic making it feasible for sprint 1 and user friendly



This is the general UI design for the funnel view section which displays level by level player gameplay data, allowing users to visualise and identify drop off points. Shows specific player sessions data, which can carry over to the simulation mode.

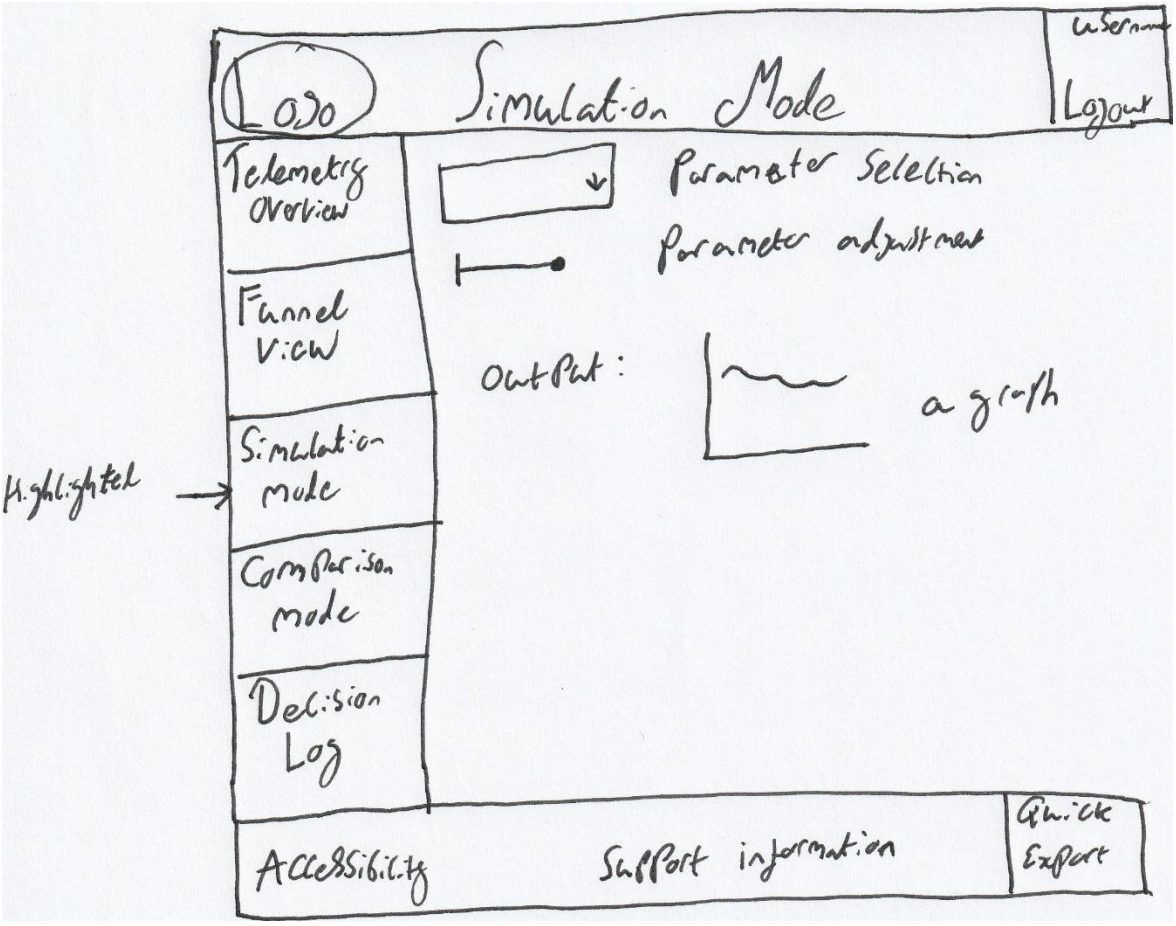
Telemetry overview includes:

1. Header- outlined header which encompasses the: title, logo, and logout function; simplistic design for first sprint
2. Logo placeholder- this will be created after the main implementation is working
3. Title- as “Funnel Viewer” to identify the page function
4. Logout function- clickable logout tile which allows the user to securely exit the page
5. Navigation tiles- left hand side navigation is handled by tiles and not plain links which improves user experience and aesthetics
6. Telemetry overview tile- opens the telemetry overview page which encompasses the general telemetry information

7. Funnel view tile highlighted- the highlighted tile identifies the current page the user is on
8. Simulation mode tile- opens the simulation mode page which has variable change functionality and outputs a visualised prediction
9. Comparison mode tile- tile isn't clickable just a placeholder for the second sprint
10. Decision log tile- opens the decision log page which logs specific variables like time, id, level, what the change was and the reason etc; keeps telemetry changes logged and accessible
11. The main section- this holds visualisation runs of player sessions; shows player drop offs by a bar chart of level by number of players; session selector functionality allows specific sessions to be visualised and hold session information which carries over to simulation mode
12. Footer- holds accessibility which is clickable opening up accessibility options such as colour-blindness options; holds support information; holds the quick export tile function which exports telemetry data to a CSV file

Design Note:

1. In the main section the information will be centred and will have graphs and tables to represent the data. Will have short explanations when you hover over each section to improve understandability and user experience
2. The design is simplistic making it feasible for sprint 1 and user friendly



This is the general UI design for the simulation mode section, this page allows the user to carry on the session funnel information in funnel view and choose specific parameters, adjusting them and visualising a predicted outcome.

Telemetry overview includes:

1. Header- outlined header which encompasses the: title, logo, and logout function; simplistic design for first sprint
2. Logo placeholder- this will be created after the main implementation is working
3. Title- as “Simulation Mode” to identify the page function
4. Logout function- clickable logout tile which allows the user to securely exit the page
5. Navigation tiles- left hand side navigation is handled by tiles and not plain links which improves user experience and aesthetics
6. Telemetry overview tile- opens the telemetry overview page which encompasses the general telemetry information

7. Funnel view tile highlighted- the highlighted tile identifies the current page the user is on
8. Simulation mode tile highlighted- the highlighted tile identifies the current page the user is on
9. Comparison mode tile- tile isn't clickable just a placeholder for the second sprint
10. Decision log tile- opens the decision log page which logs specific variables like time, id, level, what the change was and the reason etc; keeps telemetry changes logged and accessible
11. The main section- this holds visualisation runs of player sessions; shows player drop offs by a bar chart of level by number of players; session selector functionality allows specific sessions to be visualised and hold session information which carries over to simulation mode
12. Footer- holds accessibility which is clickable opening up accessibility options such as colour-blindness options; holds support information; holds the quick export tile function which exports telemetry data to a CSV file

Design Note:

1. In the main section the information will be centred and will have graphs and tables to represent the data. Will have short explanations when you hover over each section to improve understandability and user experience
2. The design is simplistic making it feasible for sprint 1 and user friendly

Page navigation for users who already have an account:

Login -> Dashboard Hub -> Subpages (telemetry overview/funnel view/simulation mode/ comparison mode/decision log) -> Logout -> Login

Page navigation for users who have to create an account:

Login -> SignUp -> Dashboard Hub- > Subpages (telemetry overview/funnel view/simulation mode/ comparison mode/decision log) -> Logout -> Login
